SUMMARY

DevOps engineer with about seven years of hands-on work across on-prem and cloud. I set up the first CI/CD and container workflow at my previous company, and now run Kubernetes and Jenkins pipelines for 60+ microservices on Azure. Most of my time goes into automating the boring parts of ops so releases are quick and nobody has to babysit them. AWS Certified Solutions Architect – Associate.

EXPERIENCE

Senior DevOps Engineer, Sterling Wells Nepal Apr 2026 – Present

- Run the platform for **60+ microservices** across several client products, on self-managed **Kubernetes** clusters built on **Azure** VMs.
- Own the **Jenkins** pipelines these services ship through, from build and test to deployment on the clusters.
- Led the technical work that got two products, **Rentalbux** and **Figsflow**, through **Cyber Essentials** certification.

CAS Trading House Aug 2019 – Oct 2025

Senior DevOps and System Engineer *Aug 2021 – Oct 2025*

- Started the company's DevOps practice. Moved teams onto a central **GitLab** setup so code lived in one place with one way of working.
- Built CI/CD pipelines in **GitLab CI** and **Jenkins** for build, test and deploy, with **SonarQube** checks on every run.
- Containerized a monolithic application with **Docker** and split it into microservices that deploy and scale on their own.
- Switched builds to multi-stage Dockerfiles, which shrank images and cut pipeline time from about 2.5 minutes to a few seconds.
- Set up an on-prem **Kubernetes** cluster with kubeadm.
- Replaced repetitive manual ops work with **Ansible** playbooks, and provisioned VMs and cloud resources with **Terraform** and **Vagrant**.
- Ran **Zabbix** monitoring for servers and applications, with alerts routed straight to the team that owned the problem.

System Engineer *Aug 2019 – Aug 2021*

- Supported the **Symantec IGA (Broadcom)** deployment at **Ncell Pvt. Ltd.**, handling identity lifecycle management and access governance for the client.

SELECTED PROJECTS

GitOps delivery on Kubernetes

- GitLab CI builds and tests the app, pushes the image, then bumps the Helm chart. **ArgoCD** picks up the change and deploys it.
- Exposed services on bare metal with **MetalLB** and an Ingress controller.

DevSecOps pipeline

- Jenkins pipeline that runs **Gitleaks** for secrets, **SonarQube** for code quality and **Trivy** for image vulnerabilities before pushing and deploying to Kubernetes.

Application monitoring for Newgen and Finacle (banking)

- **Zabbix** and **Grafana** dashboards covering host health, WebSphere frontend services, Finacle backend services and Oracle DB.

AWS work (Adex International apprenticeship and bootcamp) 2025 – 2026

- Three-tier architecture on AWS written in **Terraform**, deployed through **GitHub Actions**.
- Serverless image-processing pipeline with S3, Lambda, API Gateway, DynamoDB and CloudFront.
- Multi-tier VPC with public/private subnets, bastion host and RDS. Highly available web tier with ALB, Auto Scaling, Route 53 and CloudWatch.

Other

- ELK stack on Docker and EFK stack on Kubernetes for central logging.
- Customized Frappe Books (open-source accounting) for my own business: removed what I didn't need, added department-store style bill printing. Still in daily use.

SKILLS

Cloud	Azure; AWS (EC2, S3, VPC, Lambda, RDS, IAM, CloudWatch)
Containers	Kubernetes (Ingress, MetalLB, StorageClasses, StatefulSets), Helm, Docker, Docker Compose
CI/CD & GitOps	GitLab CI, Jenkins, GitHub Actions, ArgoCD
IaC & config	Terraform, Ansible, CloudFormation, Vagrant
Security & quality	SonarQube, Trivy, Gitleaks
Observability	Prometheus, Grafana, Zabbix, ELK / EFK
Languages	Bash, Python, Go
OS	Linux (RHEL)

CERTIFICATIONS & TRAINING

- **AWS Certified Solutions Architect – Associate** (SAA-C03), June 2025
- KodeKloud (2025): CKA course, Kubernetes for Beginners, Docker for Beginners, DevOps Prerequisites
- RHEL 9 Bootcamp, N9 Solution (2024)
- AZ-500 Microsoft Azure Security training, Styava (2022)
- Meta on Coursera (2024): Programming in Python, Version Control, Databases for Back-end Development

EDUCATION

Bachelor's in Computer Engineering, Advance College of Engineering & Management, Balkhu, Kathmandu
